

# The goal is for students to develop higher-level research questions.

### **Level One:**

My research is about a broad topic. I can complete the assignment by using a general reference source such as an encyclopedia. I have no personal questions about the topic.

Example: My research is about the economy of a state.

## Level Two:

My research answers a question that helps me narrow the focus of my search. This question may mean that I need to go to various sources to gather enough information to get a reliable answer. The conclusion of the research will ask me to give a supported answer to the question.

Example: What role has manufacturing played in an assigned state's economic development?

### **Level Three:**

My research answers a question of personal relevance. To answer this question, I may need to consult not just secondary sources such as magazines, newspapers, books or the Internet, but use primary sources of information such as original surveys, interviews or source documents.

Example: How can one best prepare for a career in manufacturing in my area?

# **Level Four:**

My research answers a personal question about the topic and contains information that may be of use to decision-makers as they make policy or distribute funds. The result of my research is a well-supported conclusion that contains a call for action on the part of an organization or government body. There will be a plan to distribute this information.

Example: How might high schools change their curricula to meet the needs of students wanting a career in manufacturing in my state?
